Applications are being sought for a part-time (20 hour/week) research assistant position starting August 22nd, 2017 or sooner in the Clinical Neuroscience Laboratory of Dr. Ruchika Prakash at the Ohio State University. The laboratory is currently conducting several randomized controlled trials, designed to look at the effects of lifestyle interventions, such as mindfulness training and exercise, in improving cognitive and emotional control in older adults and in individuals with multiple sclerosis. The applicant will work primarily on a neuroimaging study investigating attentional control in older adults. This position is designed for individuals who are interested in building their research experience and learning about the field of health neuroscience. Responsibilities will include facilitating recruitment efforts between the laboratory and community partners. Given that the applicant will be updating and maintaining the laboratory website and social media accounts, some programming experience is desired. The applicant will also have the opportunity for involvement in collecting and managing participant data.

If you are interested in being considered for the position, please apply by submitting a current CV, a brief statement of interest, and names of three references to ra@clinicalneurosciencelab.com.

If you have questions about the position or the lab, please contact Stephanie Fountain-Zaragoza at fountain-zaragoza.1@osu.edu.
